Analyze

Create and manage courses and users

Turn your existing content into dynamic courses, or build new courses using our creation tools.

Creating a course is as simple as dragging and dropping videos, HTML, PDFs, or any other material you want to share with your students.

Add quizzes, surveys, discussions, and multimedia content to complete your course.

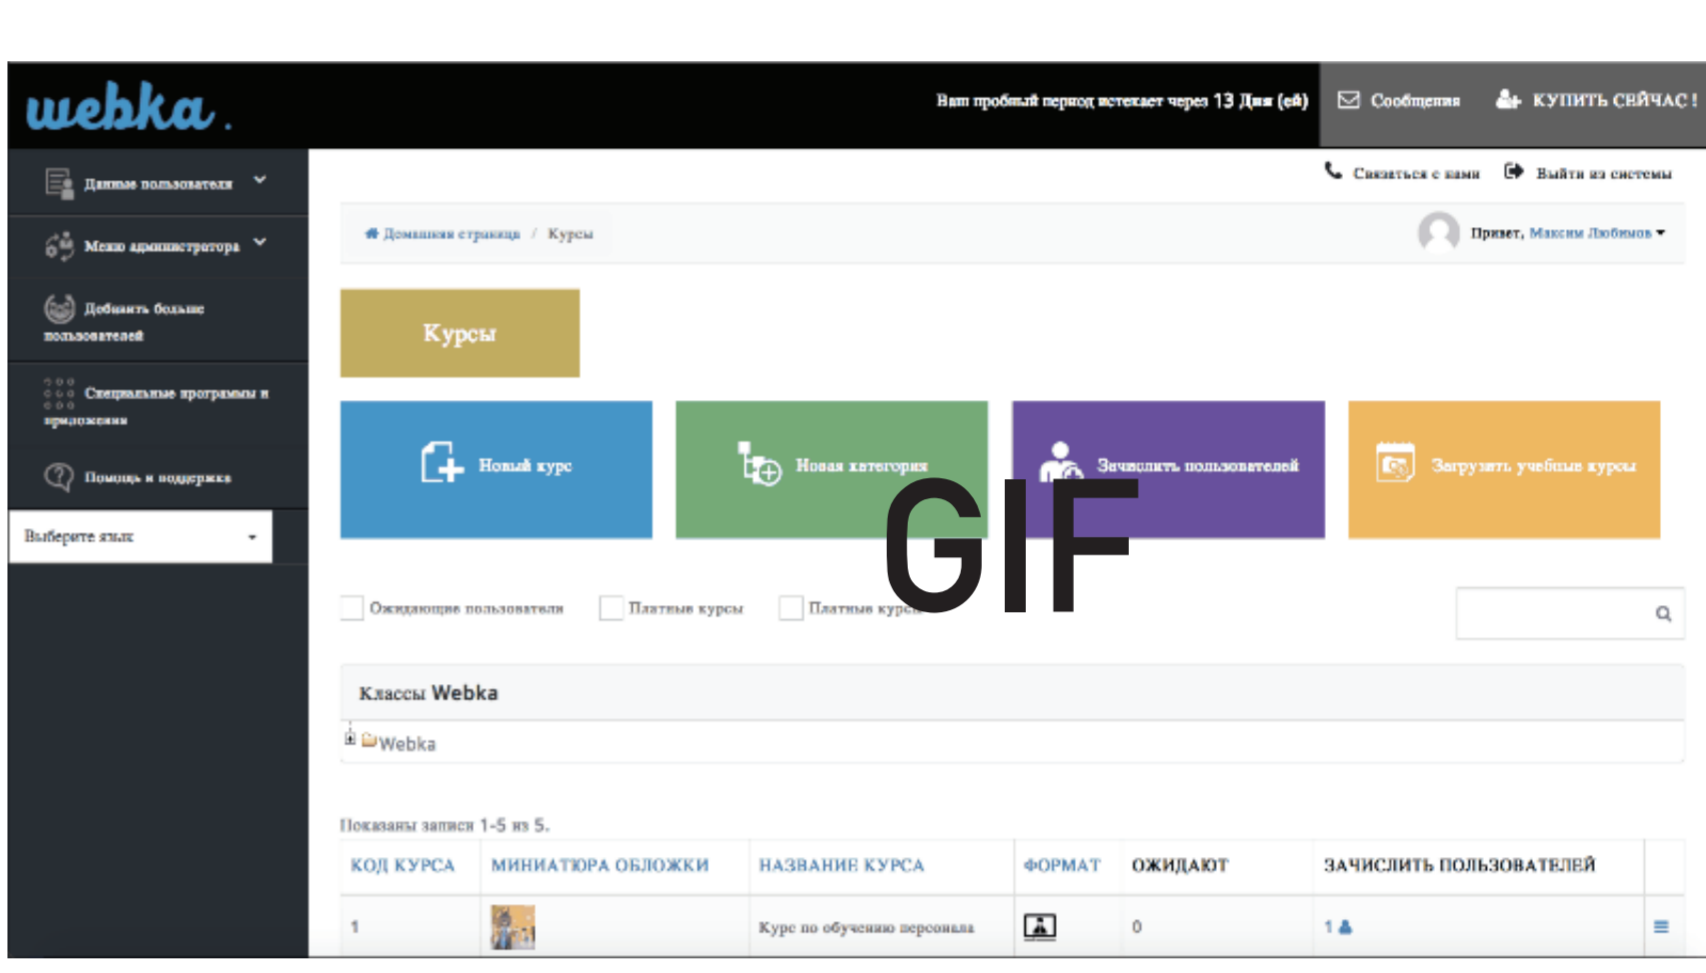

Publish courses, opening their specific groups and users

Personalize the platform and invite your learners

Follow the learning progress of learners and see detailed statistics about any user results.

Set tags on questions to track the results in specific fields of expertise.

Issue certificates to your listeners and enjoy the management of the platform anytime and anywhere.

The platform is ideal for

For Training Companies

For Corporate University

For Trainers

LMS features

Build Lessons and Courses

Build and create the most beautiful courses with our easy to use cloud based LMS. Combine text, video, images, practice questions and exams.

Build Courses
Use our **course builder** to create engaging online elearning courses.

Create Exams
Test your users at the end of a course with a real exam. Put their gained knowledge to the test with an **online exam**.

Make Assessments
Want to assess your **students**? Our LMS comes with a rich assessment tool. Create single axis or multiple axis assessments and get to know your students.

Create Quizzes
Create gamified quizzes so your students can practice and learn at the same time.

Content Elements
Combine all the content elements you need: text, video, images and practice questions to build rich and engaging courses.

White label LMS & Branding
Make your students feel at home, **white label our LMS**, embed it on your own site and don't tell anybody you're using our software. Create a custom styling to reflect your brand. Keep all the praise to yourself. You earn it!

Learn

Give your students the best distraction free elearning experience with our LMS.

Know your users
With our advanced user management you can know your users by asking extra information.

Invite users to your courses
Upload your users to our cloud based lms and send them an invite, completely automated.

Self-registration
Let your users sing-up for your courses themselves. No assigning required.

Learn everywhere
Our LMS is available on any platform: desktop, tablet or mobile. Your students can learn everywhere with our **mobile learning management system**.

Self-paced learning
Let your students **set the pace**. Studing on your own speed gets the best results.

Distraction free learning
Don't worry about designing the courses yourself. Our designers did an excellent job to create a distraction free and beautiful learning experience. Focus on the course content and learn the most.

Embed courses on your site or platform
Don't bring your students to our platform, bring the content to them. Embed your courses on your own website or platform.

Certification
Need to hand out certificates after completing a course? No worries. Our automated **course certification** process handles all the administration.

Single Sign-On
Want to embed your courses on your intranet? Our developers are glad to create a single sign-on for you.

Tracking & Reporting

Keep track of your students. Download the results and stats to evaluate your course. Integrate with your other software.

Track progress
Track the progress of your students through your courses.

Results
Take a look at the results and see where they need a hand or some extra learning material.

Stats
Have a look at the stats of your learners. Learn where you can improve your learning material.

Webhook
Use our outgoing webhooks to hook up to your preferred database. Read more about our **LMS integrations**.

3rd party Integrations
Integrate with MailChimp, Aweber or connect with Hubspot.

More information

14 - days free trial
Our free trial has a duration of 14 days. During this time you'll be able to import or create as many users as needed, create new courses, upload materials, generate reports, and much more.

Active learners
An active user is any user that logs in during the billing month. Once a user logs in for the month they count as one of your active users and they may login as many times as needed for the rest of the month.

Storage
We provide unlimited storage at no extra cost.

Billing
In case of payment under contract, please, during the free trial of the system, contact our specialist, in order to be able to import or create as many users as needed, create new courses, upload materials, generate reports, and much more. Please, go to the [Pricing page](#)

What is a portal?
Webka allows companies to create separate portals or custom learning environments for different categories of users, such as, by team, partner or customer. These portals have their own unique login ([clientname.webka.training](#)), can be quickly branded and you can distribute your courses out to them based on a number of enrollments and/or for a specific timeframe.

Apps
Note the applications that you can use to improve the performance of your system. A list of available applications is available in the admin panel

What is a cloud-based system?
A cloud-based system is one that does not require you to install specific hardware or software in order to access and use it. By logging into a web portal you can access the features of the software. Most social applications are cloud-based and the business world is following suit. Quickbooks, ITGlue, Clo, and DocuSign are examples of some of our own customers who employ a cloud-based SaaS model themselves.

What is SaaS
Software as a service (SaaS) is a cloud-based subscription model. You pay a subscription in order to gain access to the software. Usually software as a service allows you to scale your "plan" or subscription level to meet your needs rather than paying for a license that may be more rigid. SaaS pricing is typically based on actual usage of the product or service, therefore, it may be considered a more scalable investment.

Security & scalability
Cloud-based systems have to be highly secure in order to give confidence to their customers. Data should be encrypted in transit and at rest to ensure that your data is always safe. Cloud-based applications should also take advantage of their infrastructure to instantly scale to meet your number of users and be highly available.

Getting started with our tool is as easy as 1-2-3.
