GREASES

CharM greases are formulated using cutting edge nanotechnology combining MoS₂ and Graphene to deliver highest performance to automotive and industrial applications. CharM greases meet and exceed most military, automotive and industrial specs to provide excellent anti wear, antifricition, antioxidation, corrosion inhibiting properties. The greases are designed to deliver results in high humidity, high dynamic, static loads, high shock, low and high temperature applications. Due to the unique nanotechnology formulations CharM greases provide the best performance at a reasonable cost.
