Sequence	Enabled	Name	Table Column		Application LOV Mapping
10	Yes	Child Identifier	AttributeNum1		
20	Yes	First Name	AttributeChar1		
30	Yes	Last Name	AttributeChar2		
40	Yes	Date of Birth	AttributeDate1		
25	Yes	Middle Name	AttributeChar3		
50	No	Ethnicity	AttributeChar4		Child Ethnicity

Once saved, the table columns cannot be reused.

The application we are testing has been enhanced and we now want to include the "Middle Name" field during automated tests. We click on "Add" to add an additional row. To ensure the "Middle Name" is displayed on the Create Test Case Data Screen before the "Last Name" field we set the "Sequence" accordingly. As we cannot reuse AttributeChar2, we use AttributeChar3 so Last Name will continue to be stored in AttributeChar2.

If a field is disabled, it will not be shown on the "Create Test Case Data" screen

When entering data in this field on the "Create Test Case Data" screen, This field will have a LOV which retrieves data from another application using a rest API

Save Definition

Test Attributes - Mapping Table					
Test Attributes - Mapping Table [Demo Company]					
TestId	StartDate	EndDate	FieldName	FieldType	Enabled
101	01-Jan-2018	18-Apr-2018	Child Identifier	AttributeNum1	Y

101	01-Jan-2018	18-Apr-2018	Date Of Birth	AttributeDate1	Y
101	19-Apr-2018		Child Identifier	AttributeNum1	Y
101	19-Apr-2018		First Name	AttributeChar1	Y
101	19-Apr-2018		Middle Name	AttributeChar3	Y
101	19-Apr-2018		Last Name	AttributeChar2	Y
101	19-Apr-2018		Ethnicity	AttributeChar4	N
101	19-Apr-2018		Date Of Birth	AttributeDate1	Y
102	19-Apr-2018		Hospital Identifier	AttributeNum1	Y
102	19-Apr-2018		Hospital Name	AttributeChar1	Y
102	19-Apr-2018		Specialism	AttributeChar2	Y
102	19-Apr-2018		Date in Service	AttributeDate1	Y
102	19-Apr-2018		Closure Date	AttributeDate2	Y

Mappings Table
 Used to store the mappings for each predefined test, changes to the test will be date tracked. In the example above, on 19-Apr-2018, the test was extended to include the field "Middle Name". You will also see, used attributes cannot be reused so AttributeChar3 was used to store this data.

Test Attributes - Test DataTable										
Test Attributes - Test DataTable [Demo Company]										
TestDataID	TestID	AttributeNum1	AttributeNum2	AttributeNum...	AttributeChar1	AttributeChar2	AttributeChar...	AttributeDate1	AttributeDate2	AttributeDate...
002341	101	1290		...	John	Doe	...	16-Apr-1980		...
002342	101	1291		...	Jane	Doe	...	16-Apr-1980		...
002343	101	1292		...	Alice	Smith	...	09-Dec-1972		...
002344	101	1293		...	Daniel	Barts	...	24-Jun-1990		...
002345	102	12		...	Queen Elizabeth	Cardiovascular	...	20-Feb-1950		...
002346	102	33		...	St Mary's	Neurosurgery	...	09-Jul-1982		...
002347	102	25		...	John III Dental	Dental	...	17-Sep-1939	31-Dec-2018	...

Actual Test Data
 This table will have AttributeNum1-30, AttributeChar1-30 and AttributeDate1-30
 Maybe we can split this up into 3 tables
 1 table to hold AttributeNum1-30, another to hold AttributeChar1-30 and another to hold AttributeDate1-30, but they can all be joined together using the TestDataID
